

RESOL press release

Hattingen, 08/04/2011

RESOL at the Solar Power International Show 2011

German manufacturer **RESOL** has more than thirty years experience in creating innovative solar thermal control technologies. The product portfolio that awaits the visitors of RESOL's booth at this year's **Solar Power International Show in Dallas** (October 18-20th, 2011) includes solar and heating controllers as well as a broad range of accessories.

This year's new highlight is the **DeltaSol® BX L** system controller, which has been especially developed as an economical solution for multi-tank solar thermal systems. It has an impressive extra-large display and an intuitive operating interface, features pre-programmed system layouts for a range of two- and three-tank systems and special functions such as an extended priority and loading logic. Of course, the BX L is also equipped with a thermal disinfection function to protect the DHW store against Legionella, a heat dump option to avoid system overheating, evacuated tube collector- and thermostat functions and many more. With the integrated SD card slot, system data can easily be logged and transferred to a computer. Like all our recent controller models, the DeltaSol® BX L has a RESOL VBus® interface, which allows for controller connections to additional modules such as remote displays and data loggers, and is cTUVus certified.

Of course, all other current RESOL products will be on display as well – stop by for a visit and get a first-hand impression at the Solar Power International 2011: **Booth 3928**.

Further information about the BX L and the large RESOL product portfolio can be found at www.resol.com
